

have introduced claims aimed at a number of nuclides of Table 1 which accounts for the increased number of claims. We also have reformulated the claims aimed at the devices of implementation of the methods, trying to simplify their wordings and avoiding redundancies with the corresponding method.

ABSTRACT: Unchanged.

SPECIFICATION: The amendment for the specification begins on page 3.

Note that the amendment was already stated in exactly the same wording in our amendment dated 2010 January 09<sup>th</sup> which was objected by the notification of non compliance dated February 10, 2010 by Mrs. TYWANA P. LOVELACE, Legal Instruments Examiner (LIE) concerning claim identification. Hence should the specification amendment already be entered, it could be omitted.

DRAWING: Unchanged.

CLAIMS: The claim listing begins on page 7.

REMARKS: remarks begin on page 15.

We hope that this amendment better encompass the protection needed in order to further develop commercial prototypes of the invention which require a renewed interest from investment partners more likely to be associated to the protection of a US patent.

Sincerely

S-SIGNED: /ROBERT DESBRANDES/
